The Gold Standard in Urology Ultrasound Imaging

Premium Imaging Solutions for Urology

- Unparalleled Image Quality
- Innovative Quantum Technology
- Unique Triplane Prostate Imaging
- Exclusive Precision Biopsy Technique
- Comprehensive Range of Sterilizable Urology Transducers
Advance Diagnostic Confidence with Premium Urology Imaging

High-end urology imaging with fully featured premium performance ultrasound systems and innovative Quantum Technology

Exceptional Prostate Imaging

Quantum Technology offers advanced contrast resolution and gray scale maps for unparalleled prostate images. View real-time prostate images in sagittal and transverse planes for faster examinations and biopsy procedures. Perform tissue differentiation techniques such as HistoScanning™*, and perform more confident biopsies using unique tri-plane transducer with simultaneous biplane and endfire imaging capabilities. Superior needle guidance with convenient sterile, single-use needle guides.

Premium Kidney, Bladder and Testes Imaging

Superb image quality for advanced kidney imaging, measurement and biopsy. See anatomical details and variations, measure flow and find kidney stones. Visualize blood flow in testes and the penile arteries with highly sensitive color Doppler.

Robotic-Assisted Surgery

Achieve control, precision and premium performance ultrasound imaging. High resolution imaging controlled directly from surgeon’s console. Full command of system functions, including Doppler. Easy plug-and-play DVI for seamless integration of images into TilePro™. Superior high resolution 2D, 3D and color performance. Unique 3D rendering and visualization in RAPN and RARP procedures.

Ultrasound-Guided Prostate Interventions

Manage treatment of prostate patients with greater confidence using ultrasound guided prostate brachytherapy and cryotherapy techniques. Advanced imaging features, dedicated transducers, and measurement and calculation packages help differentiate, visualize and quantify tissue structures and changes more efficiently. Brachytherapy tools, including the biplane transducer and connection to planning systems, enable smooth workflow and more confident treatment.
